Forecast for Tuesday 22 Aug 2023

Weather: Extensive cloud soon spreading across much of the park as a fragmenting rain band pushes southeastwards. This will be accompanied by pulses of drizzle and light, showery, rain. Cloud will break up during the afternoon to give some sunny spells and a few well-scattered showers, likely remaining cloudier across western ranges. Some clear spells during the evening before cloud increases and thickens from the west once more late on.

Chance of cloud-free hill tops above 800m: 20% in the west increasing to 60%. 40% in the east, increasing to 80%. Lowering from the west to 40% towards midnight.

Low Cloud and visibility: Widespread cloud with bases around 400-600m, perhaps lower for some west-facing slopes. Cloud breaks developing as the rain band clears late morning, with bases lifting above most tops, although far western hills are likely to remain at least partially shrouded throughout. Visibility poor or very poor in early drizzle, but generally good outside of cloud. Moderate in rain or showers. Low cloud is likely to become more extensive again by late evening.

Freezing Level*	2700m	2400m	2300m	2400m	2400m	2400m	2400m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Windy across the tops with a risk of gales at times, mainly for the Snowdon massif and along exposed ridges. Gusts of 40-50mph will cause significant buffeting at times, possibly affecting balance. Poor visibility in cloud, particularly across western peaks, may make for difficult navigating. Elevated UV levels in bright or sunny spells, most likely in the east.

Forecast for Wednesday 23 Aug 2023

Weather: A dull and cloudy morning with probable light rain and drizzle, mainly across northern and western ranges where cloud is thicker. A drier afternoon follows with short-lived bright spells and perhaps the odd shower. Chance of a more organised band of showery rain arriving from the west during the evening, but this is low confidence.

Maximum wind: Southwest 15 gusting 25mph.

Chance of cloud-free hill tops above 800m: 50% early morning, increasing to 70% in the west and 90% elsewhere.

Low Cloud and visibility: Banks of low cloud are expected to lie across the park Wednesday morning with bases of 400-500m, likely lower and more persistent in the west and in association with drizzly outbreaks. Cloud then largely lifting clear of summits by the afternoon, although remaining rather dull, especially in the west. Visibility poor or very poor in early drizzle, becoming very good outside of cloud. Moderate in any isolated showers. Poor if late showery rain arrives.

Temperature: **Valleys:** Plus 15 Celsius, becoming Plus 20 Celsius.
At 800m: Plus 5 Celsius, rising slightly to Plus 8 Celsius.
Freezing level: Well above summits.
